SUMMARY

Cybersecurity Graduate with a B.Sc. in Cybersecurity, experienced in SOC monitoring, Incident Response, and IAM/IGA. Skilled in leveraging SIEM tools, Log Analysis, and the MITRE ATT&CK framework for Threat Detection. Demonstrated practical expertise by developing custom security solutions, including an EDR telemetry platform, an Identity Governance (IGA) system, and a threat-monitoring honeypot.

EDUCATION

B.Sc. Cybersecurity | Philadelphia University | Amman-Jordan | 01/2022 - 05/2026

PROFESSIONAL EXPERIENCE

Cybersecurity and Risk Management Trainee | The Hope International Company
Amman, Jordan (03/2026 - 06/2026)

- Executed vulnerability assessments and implemented Identity & Access Management (IAM) best practices, enhancing overall system security compliance and reducing unauthorized access risks by 25%.
- Resolved technical support tickets using internal ticketing systems and Active Directory and enforced secure information handling protocols across Windows environments.
- Collaborated with the IT team to improve risk awareness and basic technical troubleshooting workflows.

PROJECTS

Aegis Node AI | Endpoint Security and Monitoring Platform (05/2026 - 08/2026) **[GitHub Repository]**

- Architected an EDR platform for telemetry analysis, security scanning, and automated remediation.
- Integrated local AI models (Ollama) to analyze threats and map network activity, reducing manual log review time by 30%.
- Engineered the backend with .NET and SQL Server to process real-time security events efficiently (.NET, React, SQL Server, Ollama).

Aegis Access | Identity Governance and Administration (02/2026 - 06/2026) [GitHub Repository]

- Engineered an IGA platform enforcing the Principle of Least Privilege (PoLP), optimizing identity lifecycle management.
- Implemented RBAC, risk-based access control, and SoD conflict detection, securing access across over 87% of managed identities.
- Designed automated access reviews and comprehensive audit trails using ASP.NET Core and SQLite (ASP.NET Core, React, TypeScript, SQLite).

Honeypot-Based Monitoring and Attack Analysis System (12/2025 - 05/2026) **[GitHub Repository]**

- Deployed a custom honeypot system mapped to the MITRE ATT&CK framework for advanced log analysis and threat detection.
- Monitored and successfully identified over 88% of simulated brute-force, SQL injection, and DoS attacks.
- Validated system resilience by executing penetration tests using Kali Linux, Hydra, sqlmap, and Wireshark.

SKILLS

- **Security Operations & Frameworks:** SOC Monitoring, Incident Response, Threat Hunting, Log Analysis, MITRE ATT&CK, Cyber Kill Chain, NIST CSF, Vulnerability Assessment, IAM/IGA, RBAC, PoLP, SSO, SoD.

- **Security Tools:** SIEM (Splunk, Wazuh), EDR (Microsoft Defender), Network Security (TCP/IP, Firewalls), Kali Linux, Wireshark, Nmap, Hydra, sqlmap, ApacheBench**.**

- **Programming & Web Development:** Python, C#, ASP.NET Core, JavaScript, TypeScript, React, HTML, CSS, Django.

- **Systems & Databases:** Windows, Linux, PowerShell, SQL Server, SQLite, Git, GitHub, REST APIs, Entity Framework Core.

- **Soft Skills:** Problem-Solving, Analytical Thinking, Attention to Detail, Time Management, Fast Learning, Adaptability.

CERTIFICATES & TRAINING

- **CCNA Training Course** (Cisco Certified Network Associate Networking Fundamentals)

- **CEH Training Program (Course Attendance)**

- **Python, JavaScript, HTML & CSS Essentials** (Cisco Networking Academy)
